FRENCH'S SPECIAL LAWN GRASS

HOW MUCH SEED?

Grasses	Size of Area	Pounds required
Blue Grasses.....	1000 sq. ft.....	1 lb.
Bent Grasses.....	1000 sq. ft.....	2 lbs.
Fescues.....	1000 sq. ft.....	4 lbs.
Clover.....	1000 sq. ft.....	8 ozs.

HOW TO CARE FOR A LAWN

Apply fertilizer at the rate of 25 to 30 pounds per 1000 square feet. 10-6-4 with 25% Organic is ideal for this section.

A heavy clay soil can be improved greatly if you use peat moss at the rate of 2 or 3 cubic yards per 1000 square feet.

Rake lightly, breaking the crust that may have formed, but no deeper than $\frac{1}{2}$ inch. Seed in two directions. Rake or roll to get seed in contact with soil. Two pounds of fine seed per 1000 square feet is all that is needed. A quicker-growing mixture, composed of larger seeds, requires 4 pounds per 1000 square feet. Water until grass is well established.

FRENCH'S SPECIAL LAWN GRASS MIXTURES

French's Best Lawn Grass. Great care has been used in formulating this fine mixture, composed of fine-leaved, deep-rooting, viable turf grass seeds. It contains only Kentucky Blue Grass, Certified Colonial Bent, and Chewing's Fescue, producing a permanent and superior deep green, velvety turf. Will withstand heat, drought, and hard winters. 10 lbs. \$19.50; 25 lbs. \$42.75; 50 lbs. \$80.00; 100 lbs. \$150.00.

French's Super Lawn Grass. An excellent mixture for making a permanent lawn in fertile soil. It contains a high percentage of Colonial Bent and Kentucky Blue Grass in combination with other permanent grasses. 10 lbs. \$16.50; 25 lbs. \$40.00; 50 lbs. \$76.50; 100 lbs. \$147.50.

French's Special Evergreen Lawn Grass. It thrives under a wide variety of soil and weather conditions and produces beautiful velvety lawns. A favorite of hundreds. 10 lbs. \$13.00; 25 lbs. \$32.50; 50 lbs. \$63.00; 100 lbs. \$120.00.

French's Shady Lawn Grass. A carefully prepared mixture to be grown in shady spots. This mixture consists of the highest grade of re-cleaned seeds and should make a good lawn in places where it is hard to grow grass because of shade. 10 lbs. \$14.00; 25 lbs. \$32.50; 50 lbs. \$63.00; 100 lbs. \$120.00.

PERMANENT PASTURE AND HAY MIXTURE

Far superior to any other mixture for producing permanent hay and pasture. A mixture of varieties which will form a permanent pasture that lasts for years. Composed chiefly of native and acclimated grasses which have been found to be best. These are blended in their proper proportions to give the desired results. Sow on new land which has been plowed and harrowed, at the rate of 60 pounds per acre; on ground partly covered, about 30 pounds per acre. 25 lbs. \$25.00; 100 lbs. \$90.00.

SEPARATE VARIETIES OF GRASSES AND CLOVERS

Bent, Colonial (*Agrostis tenuis*). A grass of very splendid appearance, making a fine, close turn, dark green in color. It is adaptable to different soils and various locations and will stand dry weather. It has a spreading habit. Lb. 75c; 10 lbs. \$7.00.

Blue Grass, Kentucky (*Poa pratensis*). This is suited to a variety of soils and is largely used for lawns and as a pasture grass. It is unusually early and presents a beautiful green appearance in early spring when other grasses are still dormant; revives when first rains fall after a long drought. Sow 45 pounds to the acre. Lb. \$1.45; 10 lbs. \$13.00.

Blue Grass, Merion. The new Blue Grass that has proved itself by its rapidly growing popularity. $\frac{1}{4}$ lb. 75c; $\frac{1}{2}$ lb. \$1.30; lb. \$2.50.

Fescue, Chewing's New Zealand (*Festuca rubra fallax*). Especially recommended for golf putting greens and lawns; succeeds on all soils. Lb. 85c; 10 lbs. \$7.50; 25 lbs. \$17.50.

Redtop, Fancy Re-cleaned (*Agrostis vulgaris*). An excellent grass for lawns and pastures. We offer only fancy, re-cleaned seed, entirely free from chaff. Lb. 75c; 10 lbs. \$7.00.

Domestic Rye Grass. A mixture of Perennial and Annual Rye grown in the Pacific Northwest. Not a permanent grass; recommended for its rapid growth, furnishing a good cover crop or early pasture grass for one year. 10 lbs. \$3.00; 25 lbs. \$6.00; 50 lbs. \$11.00; 100 lbs. \$20.00.

White Dutch Clover Seed. Excellent for use on lawns; forms a close herbage and remains green throughout the season. We furnish the choicest grade of seed. Lb. \$1.10; 10 lbs. \$10.00.

SPECIAL FORMULAS

We shall be pleased at all times to submit prices of, or to prepare mixtures for any purpose whatever, according to the customer's own formula.

Marigold Lemondrop Makes a Beautiful Border Plant

MARIGOLDS, continued

Petite

All-America Winner, 1958

Strikingly uniform in low, somewhat spreading growth, the little double crested flowers come all-double and literally cover their neat plants with sheets of bloom. Flowers are smaller, about 1¼ inches across, freer and earlier blooming and on dwarfer plants than other Marigolds. Average growth is 5 to 6 inches tall with wider spread. Trim, flat mounds for the neatest of edging or low bedding plantings—really very colorful ground covers.

Petite Orange. Dwarf, small, and prolific.

Petite Gold. An improvement on Golden Pygmy and does not have the occasional orange markings.

Petite Harmony. An inch or two taller than the other two but extremely uniform. Dwarfer, more floriferous, earlier and richer colored than Dwarf Spry. It has deep mahogany-red collar or guard petals with a gold crest.

Petite Mixed. Above colors mixed.

Any of the above, Pkt. 25c; large pkt. 75c

FLOWER SEED CULTURES

HOW TO SOW

IN FIVE paragraphs below, designated A, B, C, D and E, we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section, the letters A, B, C, D or E under each heading refer to these cultural methods.

While our cultural instructions are definite, de-

tailed and exceptionally thorough, they should be supplemented by good gardening books and by first-hand advice from successful gardeners in your neighborhood. Success in gardening requires study, and the opportunity for enlarging one's knowledge and trying out new things is one of the most fascinating features of gardening.

A Sow in the bed, border or row where the plants are to grow. The soil should be loamy, with well-pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry; yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

B Sow in outdoor seed bed, to be transplanted. The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than 4 feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up. Shade when needed, as in midsummer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows, which may be as close as 5 inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves (the second pair of leaves to appear); or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

C Sow in flat, pot or pan outdoors or in a cold-frame. This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D"; firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location where there is free air circulation. During the spring, summer and fall, water often enough to

prevent soil from drying out. A mulch of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow-germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

D Sow indoors in a box, pot or pan. This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat," which is a shallow box with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Put in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear, bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night or 75 degrees by day is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, spacing them at least 2 inches apart; or they may be moved to small pots or to an outdoor seed bed or border.

E Sow in a hotbed or coldframe. A coldframe or a hotbed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure-heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny days, always prop up one end of the sash to prevent overheating, which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced 2 inches apart each way, or to the soil in the hotbed, or to an outdoor location, if late enough.

Early Varieties

Dixieland. Vigorous plants bearing large, uniform berries. Excellent for freezing.

Dorsett. A well-known variety, which is bright red, with a rich, delicious flavor.

Fairfax. A berry of high quality, flavor and productivity. Exceptionally large, firm berries.

Premier. This very popular early variety is very large, with smooth, bright foliage. The large berries hold their size throughout the season.

Midseason Varieties

Catskill. Produces large, strong plants, making an ideal fruiting bed. The berries are large in size, bright red in color. Considered almost frost-proof.

Sparkle. A vigorous grower and very productive. Excellent quality; splendid for freezing.

Late Varieties

Big Joe. Fruit is firm and of large size, with good color and delicious flavor; no green tips. Strong growing.

Fairpeake. A vigorous grower, this plant produces a quality berry of good size. The flesh is firm, juicy, and red to the center.

Everbearing Variety

Streamliner. One of the best everbearing sorts. Has pleasing flavor and rich red color throughout. Excellent for eating fresh, for canning or freezing. 25 for \$2.25; 50 for \$3.75; 100 for \$6.00.

Planting Instructions

SETTING PLANTS. Clip the roots if they can't be planted without doubling. The plant should be set with the crown about even with the soil after it has been thoroughly firmed around the plant.

Glads Are Perfect Summer Cut Flowers

PLANTING INSTRUCTIONS, continued

TYPE OF SOIL. Select a plot springy in nature but well drained and free of vegetation. Moisture is essential. The land which you contemplate setting to Strawberries should be kept free from vegetation during the previous year. If the land has been lying idle, plow late in summer before the weeds and grass develop seed to maturity. Heavy crops of cow peas, soy beans, etc., if plowed under in late summer while green, increase the humus and fertility of the soil, making it loose and porous and, therefore, more retentive of moisture. Prepare soil same as for truck or garden crops. Lay out rows, usually 3½ to 4 feet apart; set plants about 15 to 18 inches apart in the rows. Do not use commercial fertilizer at the roots. If soil is fertile, we do not recommend using any type of fertilizer when planting. After the plants have been set in the row, a light application of

fertilizer may be made around the plants and worked into the soil with a hoe. Do not allow the fertilizer to fall on the leaves of the plant. During the growing season additional applications of fertilizer may be made if the soil is not reasonably fertile.

MULCHING. After the first freeze during fall months, wheat or rye straw may be applied over the rows of plants for winter protection. Early in the spring, before growth starts, it should be removed from the bed of plants and placed between the rows to retain moisture and keep berries clean.

Planting Time

Northern States—April and May.

Central States—March, April and May.

Southern States—February, March and April.

FRENCH'S SUPERB GLADIOLUS

CULTURE. Gladiolus are easily grown in any ordinary good garden soil, provided the situation is sunny. They may be planted in rows, beds, or groups 6 inches apart, covered with 3 to 4 inches of soil. Press the earth firmly around the bulbs. Water freely but always after sundown and cultivate frequently to prevent the surface of the soil from hardening. A succession of blooms can be had by planting the bulbs at intervals of two weeks from about April 15 to July 1.

25 or more of a variety are sold at the 100 rate.

Our Gladiolus bulbs are DDT-Spergon treated, hand dug, hand cleaned. They are top size and free of disease—the finest sandy loam bulbs.

INSECTICIDES, FUNGICIDES AND OTHER PEST CONTROLS

IDENTIFY YOUR INSECTS!

Biting or Chewing Insects, such as beetles, caterpillars, grasshoppers and the like, can best be controlled by the application of poisons to the plant upon which they feed.

Sucking Insects, such as aphids, weevils, leafhoppers, etc., insert their beaks into the leaves, stems or fruits and suck the plant juices. Hence "stomach" poisons applied to the surface of the plant will not kill them. They must be killed by use of contact poisons.

Scale Insects, which develop protective coverings, are most easily killed by strong corrosive solutions, such as a concentrated lime-sulphur mixture, applied during late fall or winter when foliage is off the plants, and by other materials.

ACP Gibberellic—contains Gibrel. This is a particularly interesting chemical. A growth stimulant, it can be used on house or garden plants. Makes plants grow bigger, mature and bloom earlier. The aerosol container is designed for the home gardener. It eliminates mixing and is the easiest method of application. For the professional gardener and commercial grower, we offer a more concentrated material in the 4-ounce bottle. 6-oz. aerosol \$1.49; 4-oz. bottle \$7.50.

Hyponex Plant Food. A teaspoonful makes a gallon of liquid plant food. Develops sturdy growth regardless of poorness of soil. Lb. \$1.00; 10 lbs. \$8.00; 25 lbs. \$15.00; 50 lbs. \$25.00; 100 lbs. \$40.00.

Lime, Hydrated. Use 5 lbs. per 100 sq. ft. to correct soil acidity. 50 lbs. \$1.25; 100 lbs. \$2.00; 500 lbs. \$9.00.

Limestone, Pulverized. 80 lbs. for 1000 sq. ft. For making soils alkaline nothing is safer than limestone. 80 lbs. \$1.10; 5 bags \$5.00; 10 bags \$9.00.

Liqua-Vita. A liquid plant food containing three major plant foods, plus Vitamin B₁, plant hormones, and nine secondary plant foods. It is as safe on small seedlings as on large plants. ½ oz. to 1 gal. is the maximum concentration. Gal. \$4.00.

Miracle-Gro. Contains special soluble forms of vital food elements that are readily absorbed through the leaves of living plants. Nitrogen 15%; phosphoric acid 30%; potash 15%. 8 ozs. \$1.00; 1½ lbs. \$2.25; 5 lbs. \$5.00.

Baccto Peat. Should be incorporated into the soil when possible. Since Baccto Peat is in itself the ideal medium for plant growth, you cannot use too much. Ready to use. 25 lbs. \$1.69; 50 lbs. \$2.49; 100 lbs. \$4.49.

Mum Food. Prepared according to an English formula in use for more than 60 years. Supplies every element necessary for growing show blooms. 8 lbs. per 100 sq. ft. of bench surface when used as a top dressing. 50 lbs. \$6.50; 100 lbs. \$10.00.

Muriate of Potash. Should be used liberally, especially for all root crops. 25 lbs. \$2.50; 50 lbs. \$4.25; 100 lbs. \$6.75.

Nitrate of Soda. 16% Nitrogen. Used for forcing vegetables, plants, etc. 25 lbs. \$2.55; 50 lbs. \$5.50; 100 lbs. \$7.00.

RA-PID-GRO 23-21-17. For African violets, house plants, flower gardens, vegetable gardens and everything that grows. All soluble. 6 ozs. 50c; lb. \$1.25; 5 lbs. \$4.50.

Salt, Agricultural. Used upon asparagus beds for keeping down weeds. Will kill weeds on walks and roads. 50 lbs. \$1.75; 100 lbs. \$2.75.

Sheep Manure. A general natural dry fertilizer, used mostly for flowers and lawns. 50 lbs. \$3.50; 100 lbs. \$6.45.

Sacco Plant Food. The finest of fertilizers, a combined soil rectifier and growth producer for use on lawns, shrubs, flowers, trees, potted plants and vegetables. It is a well-balanced preparation containing all the feeding elements essential to the perfect growth and development of all plants. 4-12-4. Buy it, try it. 25-lb. bag \$1.70; 50 lbs. \$2.60; 100-lb. bag \$4.95.

5-10-5 Fertilizer. 5% nitrogen 10% phosphoric acid, 5% potash. A very good fertilizer for flowers and vegetables. 80 lbs. \$3.85.

Superphosphate (20%). A very high-grade phosphate. Apply 750 lbs. per acre. 80 lbs. \$3.25.

Uramite 38-0-0. Chemically, Uramite is a mixture of methylene ureas, ranging in size from small molecules which are water-soluble to moderately large ones that are water-insoluble. These insoluble methylene ureas are the predominant and most valuable portion because they provide the long-lasting, more slowly available nitrogen. Apply 10 to 15 lbs. Uramite fertilizer compound per 1000 sq. ft. in mid-fall and 10 lbs. in late spring as a basic continuing nitrogen supply. 25 lbs. \$8.95; 50 lbs. \$15.95.

MOIST-SHUR PLANTRAY

(Unbreakable Flower-Pot Saucer)
With Stimu-Pad

The New Polyethylene Plantray

Moist-Shur Plantray's exclusive construction collects overflow water in sunken bottom. The absorbent Stimu-Pad feeds this moisture, plus nutrients, back to roots and insures healthy plant growth. The lower surface is raised sufficiently to provide ventilation.

REMITTANCES—Send Money Orders or Checks. We cannot assume risk for currency not sent by Registered Mail. Please remit full amount.

IMPORTANT—We do not ship items in this catalog C.O.D. Many items, especially perishables, are not suited to this type of handling and on others the charges which you would have to pay are out of proportion to the cost of the goods.

SHORTAGES—Please open all cartons before reporting shortages. We often enclose small packages within larger bags, etc., to save transportation charges. Onion sets, roots, bulbs, and plants are often sent separately and later. If you must write us about any item, please remember to send all order papers which are enclosed in package.

DAMAGE—Inspect all merchandise at time of delivery. If damage is apparent, sign for shipment **"In bad order"** or **"damaged."**

MAILING LIST—Write us of change in your home address.

ORDER BLANKS—Please use our order blanks whenever possible. More will gladly be sent on request. Please **print** your name and address. Always put requests for information on separate sheet of paper with your full name and address.

Please accept our warm invitation to visit our store and display room. We particularly urge your presence the early part of May, when we shall have numerous colors and types of tulips in flower. **ORDER YOUR TULIPS IN MAY FROM OUR LIVING CATALOG.**

BULBS—Prepaid anywhere in U. S. A. when remittance accompanies the order.

CLOVER SEEDS—Prepaid anywhere in U. S. A. when remittance accompanies the order.

FERTILIZERS IN BAGS—Not prepaid except shipments totaling \$7.50 or more, to our Local Delivery Area. If value is less than \$7.50, or if goods are going beyond Local Area, shipment is made *via* Express, charges collect.

FLOWER SEEDS—Prepaid anywhere in U. S. A. when remittance accompanies the order.

LAWN AND OTHER GRASS SEEDS—Prepaid anywhere in U. S. A. when remittance accompanies the order.

VEGETABLE SEEDS AND ROOTS (except Potatoes)—Prepaid anywhere in U. S. A. when remittance accompanies the order.

ALL OTHER GOODS—

Marked **"Prepaid"**—We prepay anywhere in U. S. A. when remittance accompanies the order.

Marked **"Prepaid to a Certain Point"**—If beyond that point, remit postage as specified.

Marked **"Not Prepaid Except Locally"**—We prepay \$7.50 shipments in our Local Delivery Area. If shipment totals less than \$7.50 or is going beyond Local Area, remit postage if shipment is reasonably small. Heavy shipments are made by Express, charges collect.

PARCEL POST RATES

NOTE: For items marked prepaid, we pay the postage when remittance accompanies order. For items marked express collect, you pay the shipping charges on arrival. On all other items, please include postage according to zone rate and weight when you order. The shipping weight is noted beside the price. The postal chart below gives you the rates. (Any fraction of a pound is considered another pound.) If one or more of the items ordered are to be sent express collect, then all the items will be sent express collect, and you need not include postage.

Weight Limitations on Parcel Post Shipments

Seeds, plants, and bulbs weighing up to 70 pounds can be shipped by parcel post to any post office.

Fertilizers, tools and other garden accessories and equipment can be shipped to any second-class post office up to 70 pounds, but if shipped to a first-class post office the limit is 40 pounds within the first and second zones, 20 pounds beyond that. All shipments to Canada limited to 15 pounds.

In case your order will exceed in weight these limitations, and you wish it to be divided into several parcels of acceptable size, please figure postage on this basis when you are remitting postage charges.
